

Table 1. The 10C source catalogue. The extraction procedures for the various parameters are described fully in Paper I. The columns are the source name; the group name, which indicates overlapping sources (the group is named after the source with the highest peak flux density in the group and the number of objects in the group is given in brackets); the right ascension, α_{pk} , and declination, δ_{pk} , (J2000) of the source peak; the peak flux density, S_{pk} , and its uncertainty, δS_{pk} ; the right ascension, α_{in} , and declination, δ_{in} , of the source centroid (J2000; relevant for extended sources); the integrated flux density, S_{in} , and its uncertainty, δS_{in} ; the critical value, e_{crit} , of the major axis, above which the source is defined as extended, having deconvolved the telescope’s point-source response from the fitted 2-D Gaussian; the lengths, e_{maj} and e_{min} , of the major and minor axes and position angle, e_{θ} , of the source after the deconvolution – the e_{min} and e_{θ} columns are left blank for sources classified as point-like; the source type, t – point-like (P) or extended (E); a flag, ‘*’, indicating that the error from the approximation of the point-source response is significant and, consequently, the results from the Gaussian fitting ought to be treated with caution; and the region of the survey in which the source falls – deep (D), shallow (S) or neither (N). Note that the parameters from the Gaussian fitting are omitted if the fitting did not converge.
